

W3.1 OBSERVATION IN NATURE

For real

Go out and choose an organism that you find in nature. If it runs away, you can carefully place it in a box to observe it. You can also find a picture of it on the internet. Ask yourself the following questions:

1. What animal did you choose?
2. Try to come up with 10 questions at each point of the star. Observe carefully without trying to answer your questions.
3. Take another look at your questions. Are they specific and as concrete as possible? If necessary, rephrase your questions.
4. Go back inside and discuss the questions with your teacher. Are they well formulated?
5. Save the questions for the next assignment, they will come in handy!
