

W4.1 CHOOSING AND OBSERVING MODEL

What organism is your model for this lesson?

RESEARCH

You are now going to search as much information about your model as you both can. You can look on the internet, in the library or ask around by conducting interviews.

1. What striking external features are there?
 - Where does it live (what kind of area)?
 - How does it live (sources of energy, mode of reproduction)?
 - What capabilities does this organism have?

2. Go back to the questions in the 'star bursting' exercise. Can you find some more ideas for questions to ask yourself?

3. Do a second round of research.
4. Make the first draft of a leaflet (1 A4 page) with characteristics and a picture of your model.
