

W6.1 POSTER PRESENTATIONS

You are going to present your findings. All groups will give a presentation and explain what they learned from their marvellous model. Use the following questions to create a 7-minute presentation:

1. What did you choose as your model?
2. Describe the three most striking features of your model.
3. What can we learn from your organism?
4. How and where can we apply these ideas?

After the presentations, your fellow students will have the opportunity to ask questions.
