

Colours Animals See - pupil worksheet

----- cut here -----

FLY

----- cut here -----

my eye is composed of several dozen eyes

----- cut here -----

BIRD

----- cut here -----

I can see much more colourful than a human (i.e. I can see a wider spectrum of light radiation, e.g. also ultraviolet radiation, which a human cannot see)

----- cut here -----

DOG

----- cut here -----

I'm not a completely colour blind animal, but what is red I see as brown, blue and green I see as grey

----- cut here -----

SNAKE

----- cut here -----

I am able to see in the dark because I can see infrared radiation (I can actually see heat)

----- cut here -----

HORSE

----- cut here -----

I can't see straight in front of me and I don't feel comfortable if you approach me directly from the front

----- cut here -----

BAT

----- cut here -----

they say of me that I can't see at all, but it's not entirely true - I see the outlines of objects and I see the world as red and black

----- cut here -----

CAT

----- cut here -----

I can see better in the dark, but compared to humans I see the world around me more blurred, I'm a bit short-sighted animal
