

Resource 2 – risk cards

1st crossroads

Success. Keep going.

Fast-growing animals can no longer maintain their bones, and therefore they often break.
Miss two rounds.

Livestock are growing faster, but their nutritional value has decreased.
Miss one round.

2nd crossroads

Success. Keep going.

Unexpected negative effects on all species of insects - not only on pests.
Miss three rounds.

Emergence of super resistant weeds which are now starting to spread. Miss four rounds.

New crop varieties are quite expensive, only large agricultural corporations can afford them, not small farmers.
Miss one round.

Unexpected health effects on patients appear. Miss two rounds.

3rd crossroads

Success. Keep going.

Other health problems appear in some cured patients. Go back to the beginning.

More and more cases are starting to occur when patients, instead of medical interventions that save lives or health, have their offspring needlessly improved, for example, to be excellent at sport. This is how "human mutants" are created. Go back to the 2nd crossroads.

It is still very expensive, and therefore only rich people can afford it. This injustice leads to people's dissatisfaction. This is not the right progress. Miss one round. (to try to make your discovery more accessible to everyone.)
